- Oral Allergy Syndrome (OAS)
- Food Intolerance
- Gastroesophageal Reflux Disease (GERD)

IMMUNOLOGICAL DISORDERS

- Hereditary Angioedema (HAE)
- Immunodeficiencies

SKIN DISORDERS

- Atopic Dermatitis
- Urticaria
- Angioedema
- Allergic Contact Dermatitis

Treatments

IMMUNOTHERAPY

Allergy shots are a common form of immunotherapy in which a patient is routinely exposed to an allergen over a long period of time so that it slowly works on the body's immune response to reduce sensitivity and the patient can start experiencing relief from their symptoms.

BIOLOGICS

Biologic therapies are usually considered for patients who suffer from severe asthma, skin conditions, and/or nasal polyps that can't be managed through the use of more traditional treatments. We make it easy and convenient for our patients to receive these life-changing therapies, administered by their AllerVie Health provider, all within our clinics!

Diagnostics

- Skin Prick Testing
- Patch Testing
- Intradermal Testing
- Blood Testing
- Oral Food and Drug Challenge
- Penicillin Allergy Testing
- Pulmonary Function Testing
 - Spirometry
 - Lung Volumes
 - Forced Vital Capacity
 - Six-Minute Walk Test
 - Exhaled Nitric Oxide Test
 - Lung Diffusion Capacity (DLCO)
